

I disagree that permitting SAVI to operate Part 15 devices as described in the Notice will serve the public interest. The center frequency proposed, approximately 433 MHz, will lead to interference with Amateur weak signal work and potential interference to the Amateur Satellite Service.

I understand that there is no technical reason for selecting this center frequency, and that the frequency was selected solely for SAVI's manufacturing convenience. I consider that it is in no wise a hardship for SAVI to select another center frequency for its devices.

I further consider that selection of 433 MHz is not in SAVI's own interest. It is likely that these devices will receive interference from licensed Amateur stations, for which SAVI is offered no protection under the Part 15 rules.

The proposed rulemaking is injurious to the licensed Amateur Radio Service, and is unnecessary to the furtherance of SAVI's business goals, and I urge rejection of the proposal.
